

CLASS-XII

UNIT	KEY CONCEPTS	LEARNING OUTCOME	ACTIVITY/ RESOURCE
1. Fundamentals of Human Geography.	Nature and Scope.	To tell about importance of Human Geography.	
2. People	- Population of the world, distribution, density and growth. - Population change, spatial pattern and structure, determinant of population changes, Age and Sex ratio, Rural-Urban composition. - Human development, Concept, selected indicators, International comparison.	Producer, consumer, composer, are the three forms of Human which is related to population, factors affecting population and its ill-effects alongwith the importances of sex-ratio.	Census Book, Map, Project Work and Suvery.
3. Human activities	Primary activities – Concept and changing trends, gathering, Pastoral mining, subsistences Agriculture. Secondary activities – Concept, manufacturing, Agro-processing, House-hold, small scale, large scale. Tertiary activities – Concept, Trade, Transport and communication and Trade. Quaternary activities – Concepts knowledge based Industry, Information Technology – USA, Britain, India its contribution.	A great change in human activities from ancient age to Information revolution age, serial changes brought in Human life and its effects.	Maps, observation and Survey.
4. Transport, communication & Trade.	- Land Transport – Road, Railways, Air, Water. - Satellite communication, cyber zone, International Technology – USA, Britain, India its contribution.	Growth in population. A lot of changes in Human activities and its pressure on Transportation and problems arising from it and its remedies.	Constitution of different models, observations.
5. Human settlement	Types, characteristics & problem. Rural & Urban, Morphology of cities, Problems related to Human settlements in developing country.	Changes in land use pattern because of Human settle-ment and its problems.	Map, Models of different Hou-ses, Survey.

UNIT	KEY CONCEPTS	LEARNING OUTCOME	ACTIVITY / RESOURCE
1. Introduction	Location, Neighbourhood relations and place of India in a world.	Location and extension along-with place of India on world map and politics.	Map, problems related to neighbouring country.
2. Physical aspects & Drainage system.	Physiography, relief, Drainage system, Physical divisions.	Utility of Physio-graphy, rivers for Human life. To develop the technique of conservation.	Map, Excursion, observation.
3. Climate, Vegetation and soil.	- Weather & climate, Distribution of temperature, pressure, winds & rainfall. Indian monsoons, Natural vegetation – types and distribution. Wildlife conservation. - Soil, Major types (ICAR classification) their distribution and conservation.	Interrelation of climate, vegetation and soil with Human life and its effects on it.	Map, Observation
4. Resources and development	Land resources : Agriculture land use, major crops and Agricultural development and problems. Water resources : Achievement and usages, problems and conservation. Mineral and Energy resources : Metals and non-metals, minerals and its distribution and conservation, conventional and non-conventional resources of Energy.	Different source of resources related to India, its achievement, distribution and its utility alongwith conservation.	Map, Survey, collection of data.
5. Transport, communication & International Trade.	Road, Railways, Water-ways, Airways, Gas and Oil pipeline, National electricity grid.	To make aware with the problem and pressure created by vehicle, Transportation in the country.	Map, Collection of Data.
6. Population	Distribution, density & growth, composition of population, language and religion, rural-urban population.	To make aware with the factors and its ill effects which influence the population.	Map, Observation
7. Natural Hazards and management.	Flood and Drought, Earthquake and volcano, landslides, cyclones, T-sunami.	To make aware with different aspects related to disaster and disaster management.	Field survey and observation, collection of Information.

Practical Assignment in Class-XII

UNIT	KEY CONCEPTS	LEARNING OUTCOME	ACTIVITY / RESOURCE
1. Processing of Data and Thematic mapping	Sources of data, tabulating and processing of data, calculation, averages. Measures of Central tendency, Maps construction.	Collection of data and information and its interpretation through different process.	Line formation and Analysis.
2. Regional Study	- Field survey and study, directions of Map, observation, construction of Diagram. Study of one local aspects. (i) Pollution (ii) Fall in the level of underground water. (iii) Change in land use pattern (iv) Poverty	Regional study and observation locals problem and its solutions and its awareness.	Field Survey and Map construction.
3. Survey	Chain is tapes survey, Needs and its uses.	To improve the activity by surveying.	Field surveying, and line construction.
4. Identification of Rock and Minerals.	- Minerals – Quartz, Mica, Bauxite, Hematite, Calcite. - Rocks – Granite, Basalt, Sand stone, lime-stone, shell, slate.	The identification of rocks and minerals and three characteristics during field survey.	To identify the rock & minerals.
5. Records and Practical Books	Aerial Photography, Remote, Sensing.
